

Key Features

- Currently only available for Extreme tiR and fully-ducted Platinum Split units
- Convert your existing WhisperKOOL unit's controller to a controller that is controlled by the 24V thermostat of your choice
- Plug-and-play design makes installation a breeze
- As with previous iterations of the 24V Conversion Kit, you can tap into the industry-leading smart technology from Nest, Ecobee, or Honeywell

Features

Take advantage of the latest in smart thermostat technology from Nest, Ecobee, or Honeywell.*

Previously available only as an add-on at the time of purchase, WhisperKOOL's 24-volt thermostat conversion kit is now available as an aftermarket option. Like WhisperKOOL's previous thermostat conversion kits, the all-new in-field 24V thermostat conversion kit allows you to utilize industry-leading thermostat technology in your wine cellar.

Simply select a 24-volt thermostat of your choice, order our in-field conversion kit, and change out the standard thermostat on your WhisperKOOL cooling unit. The conversion kit's simple plug-and-play design makes it easy to install in minutes.

Note

The use of the 24-volt thermostat conversion kit eliminates the thermostat normally included with the system and allows your contractor to select, purchase and install the thermostat technology of your choice, including but not limited to Nest, Ecobee, and Honeywell.

****When purchasing a unit built utilizing the 24V Thermostat Conversion Kit, the system will not be built with the standard WhisperKOOL control and liquid measuring bottle probe. You will have to source and purchase your own 24V thermostat to run the equipment.**
